

# MOSQUITO-BORNE DISEASE SURVEILLANCE REPORT

AUGUST 18 to 24, 2019 (WEEK 34)

## Year-to-Date Snapshot

## West Nile

### Human Epidemiology

As of surveillance week 34, ending August 24, 2019, three human cases of West Nile virus (WNV) have been reported to the Public Health Agency of Canada (PHAC) (**Table 1**). Of these, one case in British Columbia was acquired outside of Canada prior to the start of the 2019 transmission season.

**Table 1. Year-to-Date (YTD) WNV human cases, by disease classification and province (January 1-August 24, 2019)**

Province	Clinical Cases			Total Clinical Cases <sup>1</sup>	Asymptomatic Infections <sup>2</sup>	YTD Grand Total	Rate <sup>3</sup> (per 100,000)
	Neurological	Non-neurological	Unclassified				
British Columbia	0	1	0	1	0	1	0
Alberta	0	0	0	0	0	0	0
Saskatchewan	0	-	-	0	0	0	0
Manitoba	0	0	0	0	0	0	0
Ontario	0	1	0	1	1	2	0
Québec	0	0	0	0	0	0	0
Maritime Provinces	0	0	0	0	0	0	0
Territories	0	0	0	0	0	0	0
<b>Total</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>2</b>	<b>1</b>	<b>3</b>	<b>0</b>

<sup>1</sup> Clinical cases are the sum of confirmed and probable: WNV neurological and non-neurological syndromes, along with any unclassified. <sup>2</sup> Satisfies WNV diagnostic test criteria in the absence of clinical criteria (i.e., asymptomatic blood donors whose blood is screened by blood operators, Canadian Blood Services or Héma-Québec. <sup>3</sup> Calculated with grand total of clinical and asymptomatic cases, using Statistics Canada 2018 population estimates.

**Figure 1. Geographic distribution of WNV human clinical cases and asymptomatic infections in Canada, 2019**

**Mosquito, Wild Bird & Equine Epidemiology**

As of week 34, PHAC has been notified of 7,904 mosquito pools tested for WNV. Of these, 43 (0.54%) were positive in Quebec (5), Ontario (32) and Manitoba (6) (**Table 2**).

Ten of 34 dead wild birds have tested positive for WNV, by the [Canadian Wildlife Health Cooperative \(CWHC\)](#) in Saskatchewan (1), Ontario (6) and Quebec (3) (**Table 3**).

Since the start of this season, the [Canadian Food Inspection Agency \(CFIA\)](#) has reported two horses that tested positive for WNV in British Columbia (1) and Saskatchewan (1) (**Table 3**).

**Figure 2. (A) WNV human clinical cases and asymptomatic infections, (B) positive WNV birds, and (C) percent positive mosquito pools by episode or report week, in Canada, 2019**

<sup>1</sup>Human cases includes clinical cases and asymptomatic infection. <sup>2</sup>Episode week is based on symptom onset or best available date including: diagnosis, lab sample or date reported. <sup>3</sup>Episode week is based off date of death or best available date including: date found, submitted, or received.

**Table 2. Year-to-Date WNV positive pools and percent positive by province and nationally (January 1- August 24, 2019)**

Province <sup>1</sup>	Positive Pools	Total Pools Tested	Percent Positive
Saskatchewan	0	196	0.00 %
Manitoba	6	1164	0.52 %
Ontario	32	5338	0.60 %
Québec	5	1206	0.41 %
<b>Total</b>	<b>43</b>	<b>7904</b>	<b>0.54 %</b>

<sup>1</sup>Mosquito surveillance data is reported by the following four provinces: Saskatchewan, Manitoba Ontario and Quebec.

**Table 3. Number of WNV positive animal cases for current week and Year-to-Date (YTD) (January 1- August 24, 2019)**

Province	Wild Birds <sup>1</sup>		Equine	
	Week 34	YTD Total	Week 34	YTD Total
British Columbia	0	0	0	1
Alberta	0	0	0	0
Saskatchewan	0	1	1	1
Manitoba	0	0	0	0
Ontario	0	6	0	0
Québec	0	3	0	0
Maritime Provinces	0	0	0	0
Territories	0	0	0	0
<b>Total</b>	<b>0</b>	<b>10</b>	<b>1</b>	<b>2</b>

<sup>1</sup> Not all provinces conduct dead wild bird surveillance as part of their respective WNV surveillance program. However, WNV positive dead wild birds may be identified through the National Wildlife Disease Surveillance Program, CWHC or by specific provinces.

## California Serogroup

As of August 24, 2019, no human exposures or cases of California serogroup virus have been reported by the [National Microbiology Laboratory](#).

## Eastern Equine Encephalitis

No human cases of EEEV have been reported to PHAC since the beginning of the 2019 transmission season. The CFIA has reported three horses that tested positive for Eastern Equine Encephalitis virus (EEEV) in Ontario.

## Provincial/Territorial & International Surveillance Links

Data reported to PHAC is subject to change and may differ from provincial webpages due to reporting timelines. To obtain the latest arbovirus surveillance data, please refer to the following jurisdictional/regional webpages:

*Provincial*

[Alberta - West Nile virus](#)

[Saskatchewan - West Nile virus](#)

[Manitoba - West Nile virus](#)

[Ontario - West Nile virus](#)

[Québec - Virus du Nil occidental](#)

*International*

[U.S. Centers for Disease Control - West Nile virus](#)

[European Centre Disease Control - Mosquito-borne disease](#)

*Thank you to all our partners for participating in the National WNV/MBD surveillance program.*
